

28 March 2025

To whom it may concern,

iBeta Quality Assurance conducted Presentation Attack Detection (PAD) testing in accordance with ISO/IEC 30107-3. iBeta is accredited by NIST/NVLAP (NVLAP Lab Code: 200962) to test and provide results to this PAD standard (certificate and scope may be downloaded from the NVLAP website).

This testing was conducted with Online Mobile Services Joint Stock Company's MoMo Face Authentication v4.2.0 application, supported by its backend component MoMoFaceLiveness v4.2.0, on an Apple iPhone 13 Pro running iOS 17.4.1. iBeta conducted active liveness testing from 12 March to 28 March 2025

Testing was conducted in accordance with the contract for a level of spoofing technique that only utilized mid-level methods to create an artefact of the genuine biometric for use in the presentation attack. The subjects for the test effort were cooperative – meaning that they were willing and able to provide any and all biometric samples, including high quality biometric facial samples. The test time for each PAD test per Presentation Attack Instrument (PAI) was limited to 24 hours. This is considered a Level 2 PAD test effort (second of three levels).

The test method was to apply 1 bona fide subject presentation that alternated with 3 artefact presentations such that the presentation of each species consisted of 150 Presentation Attacks (PAs) and 50 bona fide presentations, or until 24 hours had passed. The results were displayed for the tester on the device as "Your face is real" for a successful attempt or "Processing error – The image does not correspond to a real person" for an unsuccessful attempt.

iBeta was not able to gain a liveness classification with the presentation attacks (PAs) on the MoMo Face Authentication v4.2.0 application over a total of 750 attacks on the iPhone 13 Pro, resulting in an Attack Presentation Classification Error Rate (APCER) of 0%. The Bona Fide Presentation Classification Error Rate (BPCER) was also calculated and may be found in the final report.

The MoMo Face Authentication v4.2.0 application and its supporting backend component MoMoFaceLiveness v4.2.0, installed on an Apple iPhone 13 Pro running iOS 17.4.1, were tested by iBeta to the ISO 30107-3 Biometric Presentation Attack Detection Standard and found to be in compliance with Level 2.

Best regards,

Ryan Borgstrom iBeta Quality Assurance Director of Biometrics (303) 627-1110 ext. 182 RBorgstrom@ibeta.com
